PROFESSIONAL SUMMARY

Cloud and DevOps Engineer with 3+ years of hands-on experience in AWS, Azure, Kubernetes, Terraform, CI/CD pipelines, and infrastructure automation. Specialized in managing enterprise production workloads with IAM security policies, disaster recovery, and full-stack observability using Prometheus, Grafana, and Datadog. Reduced deployment cycle time by 35%, cut manual operational effort by 40%, and maintained 99.9% uptime SLA. Expertise in HA architectures, failover testing, and RTO/RPO optimization. Proven track record managing 100+ servers, 50+ containerized microservices, and 100% Terraform-managed infrastructure with Git version control.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, EKS, RDS, Lambda, S3, CloudWatch, IAM, Route 53, VPC, ALB, AutoScaling), Azure (AKS, Key Vault, NSG, VNet), GCP

Infrastructure as Code and Version Control: Terraform, CloudFormation, Ansible, Git/GitHub, GitOps, Infrastructure as Code, Python, Bash

Containers and Orchestration: Docker, Kubernetes, EKS, AKS, Helm, Pod Security Policies, Network Policies, HPA, Cluster Autoscaling, StatefulSets, DaemonSets

CI/CD and Deployment Strategies: Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, ArgoCD, Blue-Green Deployments, Canary Releases, Rolling Updates, Deployment Automation

Monitoring and Observability: Prometheus, Grafana, Datadog, ELK Stack, CloudWatch, MTTD/MTTR Optimization, Log Aggregation, Anomaly Detection, Alert Management

Cloud Security and Compliance: IAM Roles/Policies, VPC Configuration, Network Policies, Secrets Management, RBAC, Pod Security Policies, Encryption, TLS/SSL, Network Security, Compliance

High Availability and Disaster Recovery: HA Architecture Design, Failover Testing, RTO/RPO Optimization, Multi-AZ Deployment, Backup Strategies, Recovery Procedures, Auto-Recovery

AI/ML Operations: Anthropic Claude API, OpenAI API, LangChain, LLM-based Alerting, Anomaly Detection, AI-powered Automation

Databases: MySQL, PostgreSQL, Amazon RDS, Aurora, Read Replicas, High Availability, Replication, Performance Optimization

Problem-Solving and Collaboration: Root Cause Analysis, Technical Documentation, Cross-functional Collaboration, Incident Response, Team Mentoring

Operating Systems: Linux (Ubuntu, RHEL), Windows Server, System Administration

PROFESSIONAL EXPERIENCE

To The New Limited	Cloud and DevOps Engineer	Feb 2023 – Present
- Managed AWS and Azure production infrastructure across multi-tenant distributed systems, implementing IAM security policies and VPC configurations for secure communication; maintained 99.9% uptime SLA and reduced infrastructure costs by 20% - Built end-to-end CI/CD pipelines using Jenkins, GitHub Actions, Azure DevOps with blue-green and canary deployment strategies; reduced deployment cycle time by 35% and failure rate by 30% - Provisioned and managed 100% of cloud infrastructure via Terraform IaC with Git version control, eliminating configuration drift; implemented GitOps principles for continuous infrastructure synchronization - Orchestrated Kubernetes clusters on EKS and AKS with Helm, HPA, cluster autoscaling, and pod security policies; supported 50+ containerized microservices with high availability and automated scaling - Containerized 50+ microservices using Docker; implemented Network Policies and Pod Security Policies ensuring security compliance and least-privilege access across production clusters - Implemented full-stack observability using Prometheus, Grafana, Datadog, ELK Stack, CloudWatch across 100+ servers; reduced MTTD by 50% and MTTR by 40%; enabled automated alerting with anomaly detection - Developed reusable Python and Bash automation scripts and documented comprehensive runbooks for infrastructure validation and server onboarding; collaborated with development teams reducing manual effort by 40% - Performed incident management and root cause analysis; conducted HA failover testing with RTO <15 minutes and RPO <1 hour; implemented automated recovery playbooks for critical services ensuring business continuity		

AI AND AUTOMATION PROJECTS

AI-Powered Daily Infrastructure Health Reporting System

Python, AWS, Datadog API, Claude API, Kubernetes Monitoring, Custom ML Models

- Built automated pipeline aggregating health metrics from AWS CloudWatch, Datadog, Kubernetes APIs; monitors 50+ containerized services across EKS clusters ensuring complete visibility
- Integrated Anthropic Claude LLM with custom ML models to auto-generate anomaly summaries; enabled engineers to triage critical issues in under 2 minutes; reduced detection and analysis time by 75%
- Delivered HTML-formatted multi-environment reports with real-time status indicators; achieved 2 engineer-hours daily automation and improved MTTD; eliminated manual health-check overhead

Terraform Drift Detection and Auto-Remediation Bot

Python, Terraform, AWS Lambda, GitHub Actions, Git, Infrastructure Automation

- Developed AWS Lambda function running terraform plan in read-only mode, detecting drift across 30+ resources, auto-raising GitHub PRs with corrective diffs; implemented Git-based infrastructure reviews
- Implemented Git version control and audit trails for infrastructure code; eliminated 100% of undetected infrastructure changes within two weeks; maintained zero drift-related incidents over 6+ months
- Created AWS SNS alerting for drift detection with 95% automated remediation reducing manual intervention and improving infrastructure compliance

CERTIFICATIONS

- AWS Certified Solutions Architect Associate – SAA-C03
- Microsoft Certified Azure Administrator Associate – AZ-104

EDUCATION

Bachelor of Technology in Computer Science Engineering *Poornima College of Engineering* 2019 – 2023
